The Directorate of Genetics and Livestock Registration is one of the specific functions of the Ministry of Agriculture and whose mission is:

Propose, implement and control the policy for animal genetic development, the preservation of the genofondo, animal genetic resources, import and use of genetic material, the procedures for registration and control of livestock, registration of pure breeds and their crossbreeding, the systems of herd control identification and information.

For the fulfillment of our mission and functions we have a network of 42 Livestock Registries distributed throughout the province for the attention of all the owners of Big Cattle with the aim of updating all livestock events as well as other procedures that we provide that They are supported by Law No. 1279/1974 (Livestock Registries and National Registry of Animals of Pure Breeds and their Crossbreeding) where in one of its Per Therefore it states that:

WHEREAS: The main function of inscribing older cattle in the Livestock Registry and updating their movement, births, deaths, losses or losses and transfers, is to guarantee peasants and other private individuals the ability to prove their property rights, as well as to facilitate the corresponding organisms of the national economy to have a better and more complete knowledge of the country's livestock mass, which allows promoting its energetic development and growth.

The procedures that are carried out in the Livestock Registry are listed below with the documents that must be presented, as well as the contacts of the offices.
